COMPLETE LIFTING SOLUTIONS

SAL LITE STAIRCLIMBERS

UNI | ERGO | FOLD | FOLD-L

The SAL LITE is as easy to use as a hand truck. You can handle stairs quickly and safely as well, thanks to the battery-powered climbing mechanism. Going up, the LIFTKAR SAL climbs onto the next step efficiently and precisely, all by itself. Going down, the motor acts like an eddy current brake. The load glides down smoothly, softly and safely - no need to press any buttons. Your back is protected and the risk of accidents is minimised.

The SAL LITE is available in four versions. This choice makes it ideal for all applications in industry, retail and business, as well as in schools, hospitals, commercial kitchens, office blocks and many more. Whatever your transport needs, the SAL LITE is available with the right equipment options.

There are 3 different motor sizes available that offer the optimum climbing performance depending on the kinds of weight that you need to transport.

110 kg - 48 steps per min.

140 kg - 35 steps per min.

170 kg - 29 steps per min.

At just 16 kg, (20 kg with quick-change battery pack) the SAL LITE is the lightest stair climber in the world. Different tyres can be fitted to match the unit to its operating conditions.

The **SAL Uni model** is based on the classic hand truck and is particularly suitable for transporting lockers, furniture, drinks, copier paper and files.

The **SAL Ergo model** allows you to maintain an upright posture on the stairs, giving you maximum control over the goods being transported. Ideal for water cooler bottles, beer kegs, stacks of tyres and much more.

The **SAL Fold-L** is perfect at balancing heavy loads while they are being transported. Ideal for large refrigerators, doors, windows, kitchen worktops, tiles and much more.

The **SAL Fold** is ideal for transporting white goods on the stairs such as washing machines, floor sanding machines, gas cylinders and much more. The patented folding mechanism enables the handles to be positioned ideally in relation to the load.
